

# SLP Pneumatic Sealless Combination Tool

for use with Apex and Magnus Steel Strapping

## Features and Benefits

**Reliable and durable** – all metal and alloy construction with no plastic operating parts.

**Low operating costs** – wear parts designed for simple removal and replacement.

**Lightweight** – weighing only 6.7 kg SLP is easy to use without overhead suspension, reducing operator fatigue.

**Easy manual slack pull** – reduces cycle time.

**Easy to insert and align strap** – assures quick loading and positive alignment in all positions.

**Loose strap tensioning** – ideal for shrinking or settled loads.

**No seals to buy and stock** – saves time, money and reduces stock inventory.

# SLP Pneumatic Sealless Combination Tool

for use with Apex and Magnus Steel Strapping

## Design, function and operation

The SLP has been designed to meet the increasing demand for pneumatic sealless strapping tools that are lighter, smaller and easier to handle, whilst still providing the performance of larger and more expensive tools.

Compact and weighing only 6.7 kg, its lightweight helps to reduce operator fatigue significantly and its portability makes it easy to carry to and from different work stations. Its lightweight eliminates the necessity to suspend the tool over the pack, unlike the majority of multi-function pneumatic tools. The SLP, for use with steel strapping in sizes from 12.7mm x 0.5mm to 19 mm x 0.65mm, can be used with either of Signode's Apex or heavy duty Magnus strap ranges.

The SLP has been constructed to the rugged standards demanded by industries such as timber, brick and steel processing. The tool features a left hand, two strap loading facility which enables fast insertion of strap, reducing cycle times significantly. Front and rear guides ensure positive alignment in all positions. Additionally, slack strap can be pulled through quickly and easily prior to final tensioning, again reducing cycle times and improving productivity. Final strap tension is fully adjustable.

The SLP provides the most secure sealless joint with no separate seals, saving both time and money, whilst reducing the materials inventory.

### Lightweight

Lighter, compact and easier to use, the SLP provides the benefits of larger and more expensive tools without the need of overhead suspension reducing operator fatigue and improving productivity.

### Adjustable Strap Tension

Strap tension can be easily and quickly adjusted.

### Easy to Service

All wear parts are easily accessible and simple and quick to replace.

### No Seals

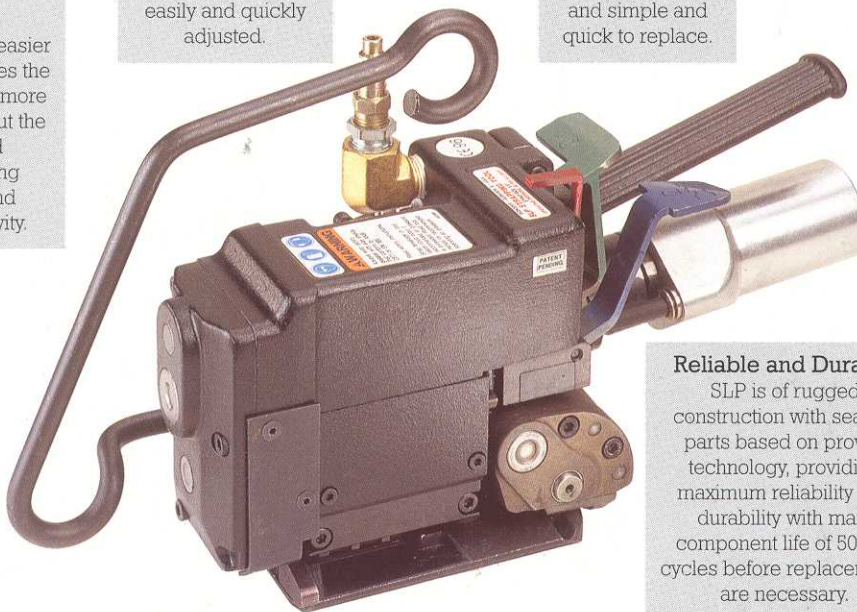

SLP provides secure sealless strapping, saving time and money and reducing component stocks.

### Easy Manual Slack Pull

Strap slack can be pulled through before tensioning, considerably reducing cycle times and improving packaging output.

### Reliable and Durable

SLP is of rugged construction with sealing parts based on proven technology, providing maximum reliability and durability with main component life of 50,000 cycles before replacements are necessary.

## Dimensions and Performance

Weight	6.7 kg
Overall Length	320mm
Width	100mm
Max. Applied Tension	5500 N

## Strapping

SLP is designed for use with Signode's Apex and Magnus strap in sizes from 12.7mm x 0.5mm to 19mm x 0.65mm. Apex, our regular duty strap, is manufactured to close tolerances and is suitable for most packaging applications. Magnus, our heavy duty strap, is a medium carbon heat treated steel strap designed for more demanding applications where high impact resistance is required.

To provide the appropriate level of corrosion resistance, both strap types are available in a choice of three finishes – blue and waxed, black painted and waxed and zinc painted and waxed.
